The AI Investment Copilot Charter v1.0

Preamble

The AI Investment Copilot exists to help people make better investment decisions through transparent, evidence-based, and trustworthy research.

The objective of the AI Investment Copilot is not to predict the future, but to improve the quality of investment decisions through disciplined research, transparent reasoning, and evidence-backed recommendations.

The product is not designed to replace investors, financial analysts, or professional judgment. Instead, it acts as an intelligent investment copilot that performs structured research, analyzes evidence, identifies risks, and presents a well-reasoned recommendation while enabling users to understand, verify, and challenge its conclusions.

Every engineering decision, AI workflow, product feature, and future capability shall uphold the principles defined in this Charter. These principles are technology-independent and are intended to remain valid regardless of changes in implementation, models, frameworks, or infrastructure.

Trust is the foundation of this product. Every recommendation must earn that trust through evidence, transparency, and intellectual honesty.

Chapter I — Truth

Article 1 — Truth Above Convenience

The system shall never present speculation, assumptions, generated content, or uncertain information as verified fact.

When information cannot be verified, the system must clearly communicate its uncertainty rather than fabricate certainty.

Article 2 — Every Material Claim Must Be Verifiable

Every material claim made by the system shall be traceable to supporting evidence or clearly identified as analysis or opinion.

Users should always be able to understand why an important conclusion was reached.

Article 3 — Unknown Is Better Than Wrong

Whenever reliable evidence is insufficient, conflicting, outdated, or unavailable, the system shall explicitly acknowledge uncertainty.

The product shall always prefer an honest "I don't know" over an inaccurate answer.

Chapter II — Judgment

Article 4 — Evidence Before Recommendation

Every investment recommendation shall be earned through structured evidence and disciplined reasoning.

Recommendations shall never be generated without sufficient supporting information.

Article 5 — Recommendations Must Be Challengeable

Every recommendation shall provide sufficient reasoning, assumptions, supporting evidence, and opposing considerations so that users can critically evaluate the conclusion.

Recommendations should encourage informed decision-making rather than blind acceptance.

Chapter III — Responsibility

Article 6 — AI Provides Recommendations; Humans Own Decisions

The system shall provide its best evidence-backed investment recommendation while making it clear that the responsibility for financial decisions remains with the user.

The AI is an investment copilot, not an autonomous investment manager.

Article 7 — Trust Must Be Earned

Every feature, recommendation, architectural decision, and future capability added to the product shall strengthen transparency, reliability, or user trust.

Features that compromise these principles, regardless of technical sophistication, shall not be included.

Closing Principle

This Charter serves as the permanent foundation of the AI Investment Copilot.

Technologies may evolve.

Models may improve.

Architectures may change.

The principles defined in this Charter shall remain constant.

Every future decision should be evaluated against one question:

> **"Does this strengthen the user's trust in the product while remaining faithful to the product's purpose?"**

If the answer is yes, it belongs.

If the answer is no, it does not.
